

IN THE SPECIFICATION

Please amend the following paragraph as indicated:

Page 2, third full paragraph:

           The molding may a generally include a quarter-round cross-section at planes transverse to the longitudinal axis. An intermediate surface may connect the wall-engaging surface and the floating-floor engaging surface. Generally, the intermediate surface is angled so that the wall, floating floor, and intermediate surface form a generally triangular shape in a plane transverse to the longitudinal axis.
